1. SUBUNIT: THE GAMMA CHAIN IS COMMON TO THE IL-2, IL-4, II PROBABLY ALSO THE IL-13 RECEPTORS.

1. SUBCELLULAR LOCATION: Type I membrane protein.

1. SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.

1. SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gamma gene.",

The 16445 polypeptides are also useful as modulating agents in cellular processes including growth promoting activity particularly the antigen-independent proliferation of T-helper cell cyones. The encoding nucleic acid is useful as primers or hybridization probes for the detection of IL-9/IL-2 receptor-like encoding nucleic acids and for tissue typing and in forensic biology. The present sequence represents the human IL-9/IL-2 receptor-like polypeptide (AAH16445).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a MBP-human zalphall ligand fusion. CC Zalphall ligand is a cytokine. The zalphall ligand is yeeful for CC Stimulating the proliferation and development of haematopoietic cells in vitro and in vivo. Zalphall ligand polynucleotides can be used as CC primers or probes for cloning the zalphall gene. The zalphall ligand color is useful for treating tumourigenesis. A zalphall ligand-saporin fusion CC toxin may be used for treating leukaemias and Ymmphomas. Antagonists CC against zalphall ligand are useful as research reagents for CC characterizing ligand-receptor interaction, Antagonists are also useful CC characterizing leyand-receptor interaction, Antagonists are also useful CC characterizing leyand-receptor interaction, Antagonists are also useful CC characterizing expansion, proliferation, Activation and differentiation CC colls involved in regulating hematopolesis. The zalphall ligand may CC virus, a parasite or a bacterium. The zalphall polypeptides, CC polynucleotides, antagonists, agonists and antibodies are also useful CC for the detection, diagnosis, prevention, and treatment of diseases CC associated with a zalphall ligand genetic defect.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ሄ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            expression plasmid containing huzalphall/MBP-6H DNA (see AAZ9454) was constructed via homologous recombination and the fusion protein was expressed in Escherichia coll BL21 using vector plasmid prapels. Zalphall may be involved in an apoptotic cellular pathway, or is a cell-cell signalling molecule, growth factor receptor, or extracellular matrix associated protein with growth factor hormone activity. The invention provides zalphall polypeptides (including fusion proteins), polynuclectides and antibodies, and methods for their use in the treatment and diagnosis of conditions associated with altered zalphall expression or activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel nucleic acid encoding zalphall e.g. viral infection or tumors, and stimulate cell proliferation -

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

interleukin-4 receptor precursor - human

N;Alternate names: IL-4 receptor

C;Species: Homo sapiens (man)

C;Cate: 30-Jun-1993 #sequence_revision 30-Jun-1993 #text_change 22-Jun-1999

C;Accession: A60386; A47603

R;Galizzi, J.P.; Zuber, C.E.; Harada, N.; Gorman, D.M.; Djossou, O.; Kastele Int. Immunol. 2, 669-675, 1990

A;Title: Molecular cloning of a cDNA encoding the human interleukin 4 recept A;Reference number: A60386; MUID:91120547

A;Accession: A60386

A;Status: not compared with conceptual translation

A;Molecule type: mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Molecule type: mRNA A;Rosidues: 1-889, 'RADTL' <II2> A;Cross-references: DBJ:D84125; NID:g1374707; PIDN:BAA12230.1; PID:g1374708 A;Experimental source: adipose cell C;Comment: This receptor is obese-phenotype-linked mutant, found in the Zuck
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Molecule type: mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                         Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The human IL-2 receptor gamma chain preform (AAR47148), including the signal peptide, is encoded by the sequence given in AAQ54828. The mature protein (AAR47149) is encoded by sequence AAQ54829. A soluble form of IL-2 receptor gamma chain (AAR47150) is encoded by AAQ54830, while a soluble form suitable for expression in prokaryotes (AAR47151) is encoded by AAQ54831. Primers 1-6 (AAQ54820-25) are based on the N-terminal sequence of IL-2 receptor gamma chain, and are used to isolate IL2 receptor gamma chain receptor cDNA. Primers AAQ54826-27 are used to obtain the protein given in AAR47151.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 4; Page 41; 50pp;

The mature protein (AAR47149) is encoded by sequence AAG54829. A soluble form of IL-2 receptor gamma chain (AAR47150) is encoded by AAG54830, while a soluble form suitable for expression in prokaryotes (AAR47151) is encoded by AAG54831 Primers 1-6 (AAG54820-25) are based on the N-terminal sequence of IL-2 receptor gamma chain, and are used to isolate IL2 receptor gamma chain receptor CANA. Primers AAG54826-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA and protein sequences of IL-2 gamma chain - useful as impregulatory agents for treatment of e.g. rheumatoid arthritis transplant rejection % \left( 1\right) =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{ 1\right\} =\left\{
